Attendees: EPA – Taimur Shaikh
Michael Baker – Sabu Paul
Dynamic Solution –Silong Lu
RESPEC – Tony Donigian

Meeting Notes

Watershed Model Update

Taim talked to his management. It was decided to hold off the watershed modeling and allocation. The information will be sent out for public notice. We need to incorporate public comments, if any to the watershed model – regarding calibration. Next step will be to solicit comments for watershed model and address them. We have the exact same version of the output that we shared with Dr. Brian Haggard and other state stakeholders. Both AR and OK agree that the watershed model is good enough for regulatory purpose, but ANRC thinks it is not good enough to regulate the poultry industry. No need to revise the watershed model at this report. Taim will prepare a one-pager to list the models and the changes made after that version. Tony needs to check the model to make sure that the final baseline model is the same as that shared to Brian. This is just a verification of the model input files. There is no regulatory time period, but Taim expects that to be about 60 or 90 days.

Lake Model situation

- Paul Craig looked at the model to review the fundamentals like Hydro dynamics and he found out that the bathymetry data has some strange profile. Paul thinks the data that Scott Wells used in the model different. Global Remote Sensing LLC probably collected the bathymetry data.

Action items

- Taim will start the public notice period for watershed model
- Taim will share the public notice information with Sabu to disseminate to the team
- Tony to check the UCI to confirm the final version of the model
